

A new light in healthcare

Lighting solutions for performance and comfort

PHILIPS
sense and simplicity

Lighting in the digital age

The personalized lighting experience can help patients relax and feel at ease during their hospital stay. Patients can choose their own personalized lighting before undergoing a medical procedure, with various soft colors that wash the walls of the examination room. This control in lighting can help the patient to feel more comfortable and relaxed during surgery.

For over a century, Philips has used its expertise in electronics to offer the world amazing products in the field of lighting. It has often complimented this knowledge with the help of experts in other fields. In developing a strategic partnership with Optimus Services, Philips extends this potential once more.

Philips has been participating with Optimus Services to develop a new state-of-the-art operating room. Staffed by a team with extensive medical experience, Optimus fully understands the needs of both healthcare professionals and patients during medical procedures. Combining the advanced lighting technology offered by Philips with the insight of Optimus pioneers this innovative approach in the medical field.

The vision of digital lighting

- Safety, Sterility, Simplicity
- To create medical interventional environments that foster a sense of safety, calm and confidence
- To upgrade the underlying outdated infrastructure of the operating room
- To establish a new standard of care
